

DRONEVEHICLE | ID 01250 | fixed RGB luminance quantile 0.10
Same sample as feature_case_1; local window selected by median-area RGB GT #2

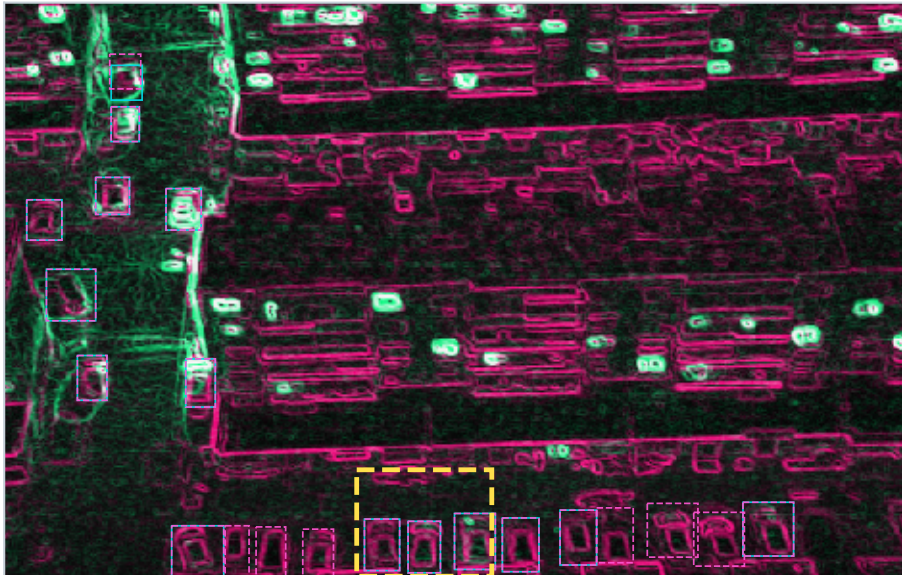

RGB image + RGB GT

IR image + IR GT

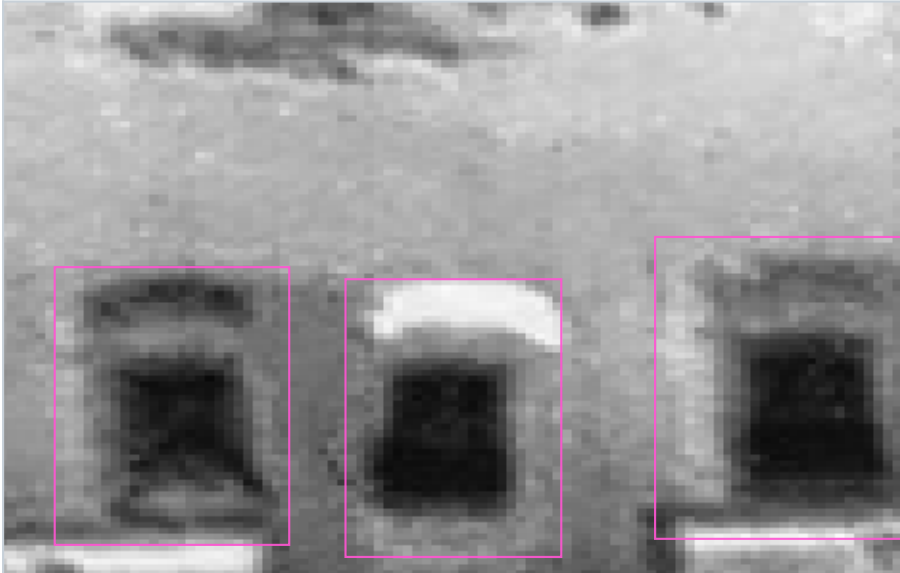

Two-color gradient overlay + both GT sets

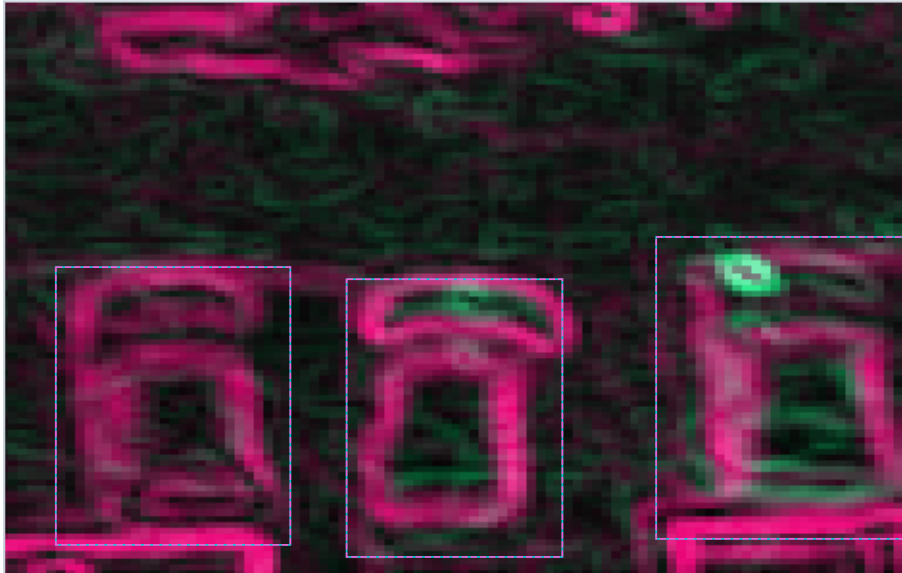

Same local window: RGB

Same local window: IR

Local gradients: no estimated alignment applied

— RGB gradients / RGB GT — IR gradients / IR GT - - - Fixed local window

Separate label files: differences may reflect alignment, object extent, or annotation choices.
Edge differences can arise from spectral response as well as geometry; this panel is not a registration-error estimator.
Gradients use per-modality 98th-percentile display scaling. Both views use normalized image coordinates; source pixels and labels are unchanged.
Original image shapes: RGB 640x512, IR 640x512. Display selection does not use prediction success, box mismatch, CKA, or gradient differences.
